	Troubleshooting and debugging	The group has identified an unexpected problem and is working to correct it in a systematic manner.	The group has identified a problem through the output of the Vpython error shell (line 57). The unexpected problem is that they have defined their force as a scalar but it needs to be given a direction (line 67)

I think this is a good example. I think you will want to have the shell output put into the example to make clear what the students recognized and what they dealt with,	Troubleshooting and debugging	The group has identified an unexpected problem and is working to correct it in a systematic manner.	The group has identified a problem through the output of the Vpython error shell (line 57). The unexpected problem is that they have defined their force as a scalar but it needs to be given a direction (line 67)	TypeError: unsupported operand type(s) for +: 'vector' and 'float'
