

Tag	Rationale from framework	Rationale within excerpt	Rationale beyond excerpt
Creating computational abstractions	The group has identified a computational abstraction as they advance.	The abstraction they are working with is for the mass of the satellite (line 93). They have identified this abstraction through its name (line 94).	This is a good example of what computational abstractions are NOT. There is an important difference between scrutinizing the numerical value of an abstraction (what this group is doing) and creating a computational abstraction.
